<http://packman.links2linux.org/package/qutecom> Ubuntu packages:

<https://edge.launchpad.net/~cavedon/+archive> Source code access

QuteCom's source code is managed using the Mercurial version management software, also known as "hg". To get your local copy of the repository, use the hg clone command: `$ hg clone http://hg.qutecom.org/[repository name]`

where [repository name] is one of the repositories you can see at <http://hg.qutecom.org>. Documentation

It is located in Trac wiki pages at <http://trac.qutecom.org/wiki>. Bug Tracker

Bug reporting is possible with our Trac available at <http://trac.qutecom.org>. Mailing lists

The main mailing list is qutecom-dev. Please join the mailing list to keep up with news. A list of all QuteCom mailing lists are at lists.qutecom.org. The old website

Interested users can also take a look at the original OpenWengo website. Sponsors and Contributors

Wengo - Initial developer of the software

Arcor - Sponsor of various enhancements and bug fixes

osAlliance - contributing many bug fixes to qutecom for the customised client version kvats.net for mobilkom austria
